

Evolution

3 Questions:

1. Where did all the matter in the universe come from? Is it eternal?
2. Has there ever been an example of a mutation which had more genetic information than the originals?
3. Can life come from non-life? Can a rock give birth?

Evolution as a religion:

Christianity

By faith we believe God created heavens and the earth.

We believe in the supernatural:

Man created from dust.

Evolution

By faith they believe they will the some day discover where all the matter in the universe came from.

They believe in the supernatural:

Life created from non-life.

Thus both Christianity and evolution are **faith based** belief systems that are **totally dependent on supernatural** (miraculous) events.

Other Problems!

1. Survival of the fittest morality.
2. Racism.
